

EEW CONGRESSIONAL REPORT CARD

NEW JERSEY'S 6TH DISTRICT SEAT HELD BY FRANK PALLONE SINCE 1993

The [Environmental Enforcement Watch](#) (EEW), a project of [EDGI](#), produced this report using data from the EPA. It provides information about pollution violations and the EPA's efforts to control pollution. Congress has the power to strengthen and oversee how well EPA protects us from pollution.

Disclaimer: Data included herein were drawn from EPA's publicly available Enforcement and Compliance History Online ECHO database on August 25, 2020. EDGI has no control over the nature, content, or sustained availability of this database. While EDGI works to assure that the information in this report is correct, that information is subject to limitations of the ECHO database, and is provided "as is." EDGI makes no representations or warranties of any kind, express or implied, about the completeness or reliability of this information. The information and images within this report are for general information purposes only. To examine this data for yourself you can view our analysis [here](#) and re-run it [here](#).

WHY AND WHAT

Why

It is Congress’s job to oversee how the laws it passes are implemented by agencies like the Environmental Protection Agency (EPA). Congress has charged the EPA with enforcing most of the laws that protect environmental health by controlling the release of pollution and hazardous materials into the air, water and land. Without effective enforcement, **these laws are meaningless**. Congress can strengthen EPA enforcement by increasing resources to the EPA, passing more effective laws, requiring better data collection, and general oversight. In the **House of Representatives**, the **Energy and Commerce Committee** is the main committee that oversees the EPA. In the **Senate**, the **Environment and Public Works Committee** is the main committee that oversees the EPA.

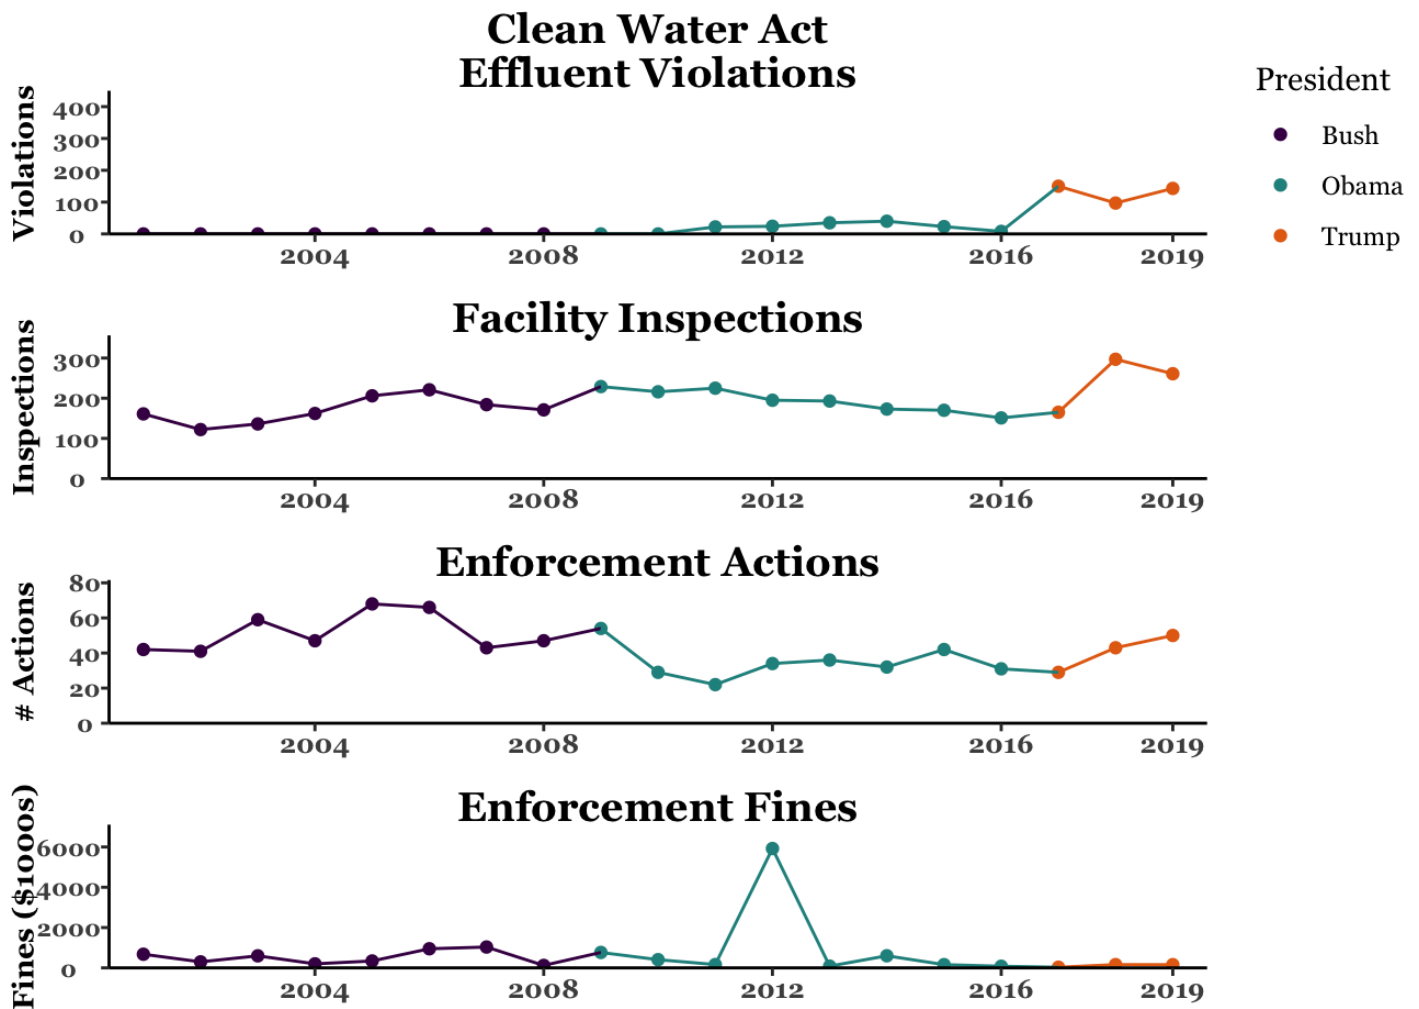

What - the Data in this report

While ECHO remains the only publicly available and comprehensive source for environmental compliance data, it is known to be extremely unreliable. According to former EPA Administrator Cynthia Giles, states often report less than 5% of violations under the regulations controlling clean air and hazardous waste, which means that ECHO data may exclude more than 95% of such violations. Therefore, other than the Clean Water Act, for which violations are reported through an automated system, violation data should not be considered accurate. It is important to note that states which might have the most violations may actually be the most responsible in terms of their reporting to EPA. Below is a color code of reliability for each data type presented in this report:

Metric	Color	Why
CWA Inspections and Violations; GHG Emissions	Green	Automatic monitoring and Reporting
CAA Inspections, RCRA Inspections; CAA, CWA and RCRA Enforcement Actions and Penalties	Yellow	Problems of pass through of data from state to EPA
CAA Violations, RCRA violations	Red	Problems of self-reporting and pass through of data from state to EPA

HIGHLIGHTS FOR NEW JERSEY'S 6TH DISTRICT

- Highlight from Open Hour
- Highlight from Open Hour
- Highlight from Open Hour

Under the Clean Water Act, the most well-reported regulation, 180 facilities, representing 22.36% of all regulated facilities in NJ6, were in violation for at least 25% of the last 3 years.

YOUR DISTRICT IN COMPARISON

Inspections per 1000 Facilities in 2019

Violations per 1000 Facilities in 2019

See color-coded table on page 1 for data reliability color codes, visualized here as x-axis labels and on subsequent pages as chart titles

- Enforcement fines nationally and statewide

CLEAN AIR ACT

The Clean Air Act (CAA) is the comprehensive federal law that regulates air emissions from stationary and mobile sources. Among other things, this law authorizes EPA to establish National Ambient Air Quality Standards (NAAQS) to protect public health and to regulate emissions of hazardous air pollutants [EPA](#). For the CAA, inspections are the most common way of identifying violations, so less violations aren't necessarily an improvement. Recent cuts in inspections is likely related to a drop in violations. [More info on CAA](#)

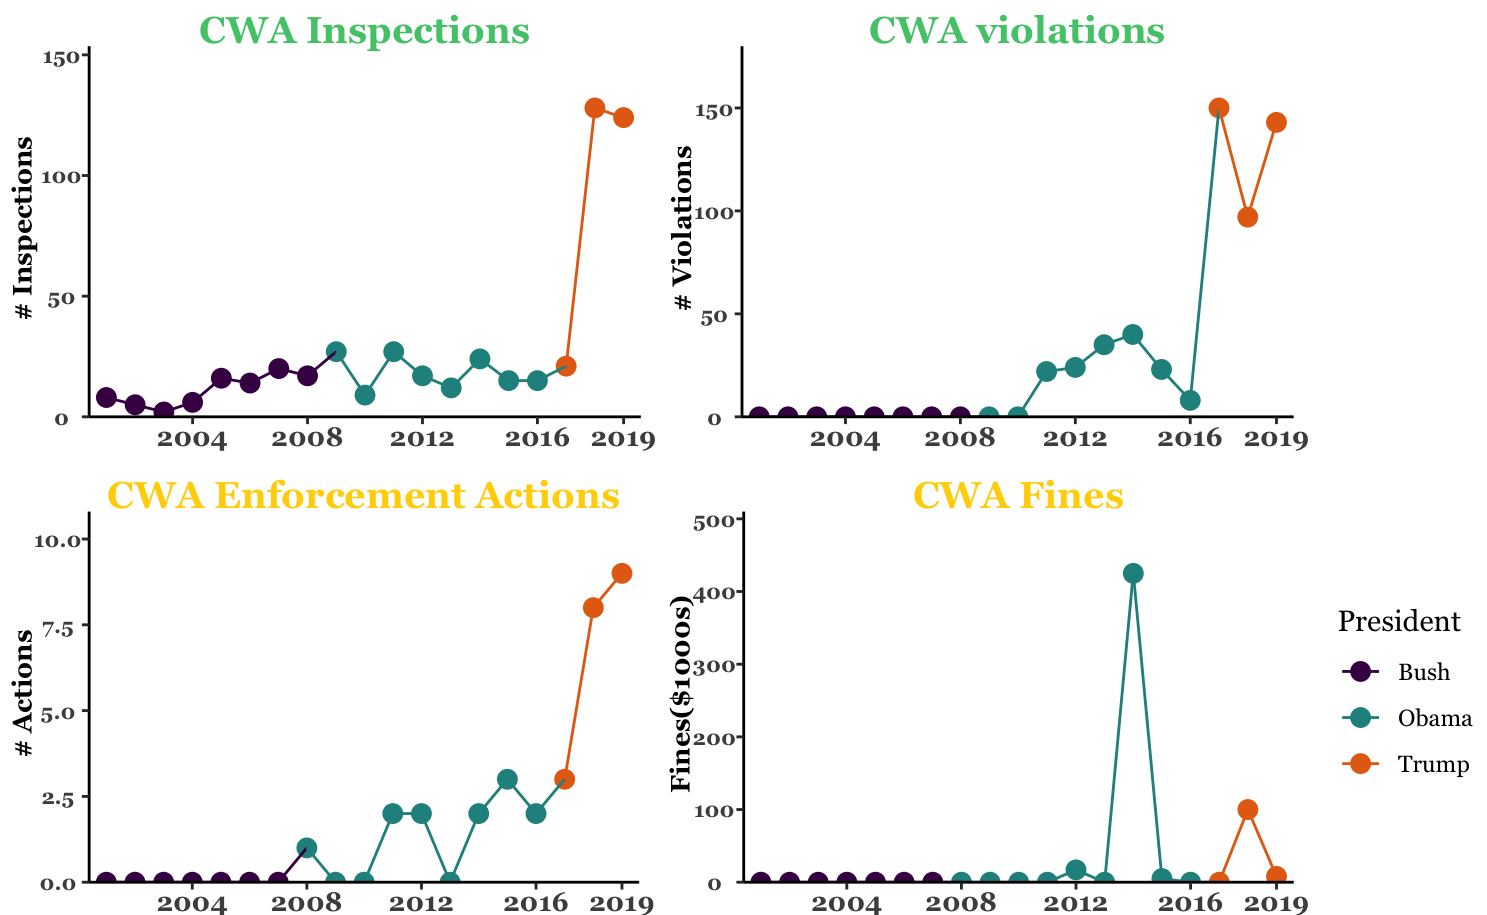

There are 453 CAA facilities

CLEAN WATER ACT

The Clean Water Act is a series of regulations that govern discharges of pollutants and regulates water quality standards for waters of the United States. The CWA established the National Pollutant Discharge Elimination System (NPDES) which permits discharges of pollutants [EPA](#). Unlike the CAA, CWA violations are reported automatically through the National Pollutant Discharge Elimination System (NPDES), so violations are recorded independently of facility inspections. CWA inspections often occur in response to recorded violations. [More info on CWA](#)

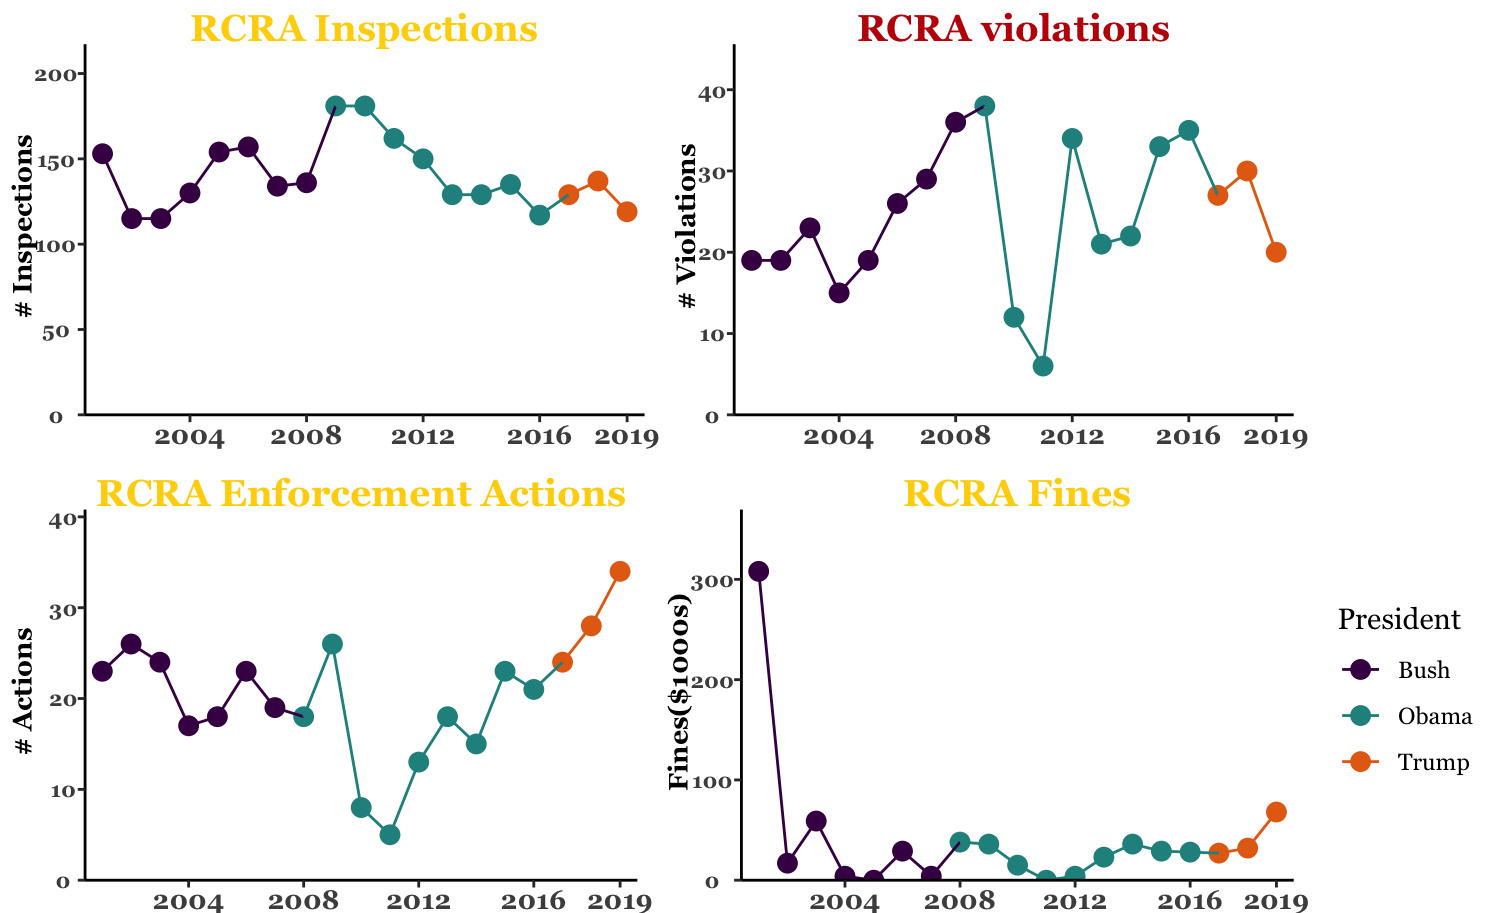

There are 604 CWA facilities

RESOURCE CONSERVATION AND RECOVERY ACT

The Resource Conservation and Recovery Act (RCRA) gives EPA the authority to control hazardous waste from the “cradle-to-grave”, regulating the generation, transportation, treatment, storage, and disposal of hazardous waste. Although facilities self-report under RCRA, like the CAA, violations are most often found after an inspection, and a reduction in violations might mean a reduction in inspections. [EPA More info on RCRA](#)

There are 984 RCRA facilities

THE GREENHOUSE GAS REPORTING PROGRAM

The GHGRP is an EPA Program mandated by law that requires reporting of major sources and suppliers of GHG emissions in the United States, including from large direct emissions sources, fuel and industrial gas suppliers, and CO₂ injections sites. About 8,000 facilities are required to report their emissions annually, covering 85-90% of total US Annual GHG emissions [EPA](#). By reporting direct sources and suppliers in the same way, the program can misrepresent the geography of emissions, making it appear as if industrial regions have an excess of emissions and suburban areas—where many household-level direct emissions occur—have little to no emissions. [More info on GHGRP](#)

There are 12 GHG facilities

LEGISLATOR INFORMATION

Frank Pallone

Democrat

In office since January 5th, 1993

Relevant Committee Membership: Chair, [Energy and Commerce Committee](#)

[House Energy and Commerce Committee](#)

This Committee is the oldest house Committee with the broadest jurisdiction of any authorizing committee. The Committee oversees the EPA, and legislates on issues like environmental protection, clean air, climate change, safe drinking water, toxic chemicals and hazardous waste, and nuclear facilities. Currently, the Committee includes 55 members – 24 Republicans and 31 Democrats. The subcommittees of primary interest to these reports are Environment & Climate Change and Oversight & Investigations.

Relevant Subcommittees:

1. [Energy](#)
2. [Oversights and Investigations](#)
3. Environment and Climate Change

DATA LIMITATIONS

Disclaimer

On March 26, 2020, the US EPA released [a policy memo](#) suspending pollution monitoring requirements for industries that claim to have been impacted by COVID-19. Since then, as part of EDGI's ongoing Environmental Enforcement Watch (EEW) project, we have conducted original data science research using EPA's Enforcement and Compliance History Online ECHO database to investigate the effects of this policy on facility reporting of environmental data and compliance with environmental protection laws. Results show that, despite relatively few facilities claiming the COVID exemption, a much larger proportion of facilities are still failing to report. While both industry non-compliance and EPA non-enforcement reflect longer-term trends (as much as 70% of facilities were already in non-compliance with the nation's environmental laws for certain regulatory programs pre-COVID, [Giles 2020](#)), we have decided to exclude 2020 data from this analysis due to EPA's COVID-19 policy. This decision serves to provide the fairest and most accurate picture of enforcement and compliance trends, and to avoid skewing and misrepresenting the data. .

The ECHO database compiles information from a number of distinct state and federal databases with inconsistent reporting schemes that lead to data gaps and inaccuracies such as geocoding errors (e.g. a facility in Texas is incorrectly coded as residing in Louisiana); multiple program IDs attributed to a single facility (which can cause one facility to appear as multiple, distinct facilities in the data); and an inability to know what/how many facilities operated in the past. EPA acknowledges some of these inconsistencies, and sometimes includes disclaimers on the ECHO website detailing them. The agency's official position is that ECHO data is reliable-enough from 2001 onward, but former EPA Administrator Cynthia Giles says that states often report as little as 5% of compliance violations to ECHO for certain regulatory programs. Here are just some of the issues that prevent citizens from knowing how well pollution has been, and is, being controlled:

- Some facilities chronically or repeatedly fail to comply with pollution laws. But available EPA data only goes back X years, so you cannot tell how well facilities in your area have complied with environmental protections over time.
- No idea how many facilities operated in the past
- Multiple program IDs for a single facility/permit
- Geocoding errors
- Mislabeled times (e.g. the inspections that will occur in 2052)

- Data entry errors that place inspections and enforcements in the wrong year (some in the future!) and that place facilities in the wrong state or area.

ABOUT THE AUTHORS

About EEW and this Project

Environmental Enforcement Watch (EEW) is a collaborative project across EDGI working groups. The EEW project builds on EDGI's 2019 [Sheep in the Closet Report](#) that documents large declines in EPA enforcement of environmental laws. This project and others used data from EPA's [ECHO](#) database, revealing how useful ECHO could be for communities to track pollution and EPA responses in their areas. However, they also revealed the inaccessibility of ECHO for non-specialists, along with many omissions, errors, and confusions present in the data itself.

A key goal of EEW is to highlight gaps and inadequacies in the enforcement of environmental laws, demonstrating EPA's failure to fulfill its congressionally mandated duty. To help bring awareness and action to the state of environmental non-compliance across the US, we are using Jupyter Notebooks that utilize ECHO data to present these congressional report cards for the 75 Senators and House Representatives that sit on the House Energy & Commerce Committee and the Senate Environment & Public Works Committee. By providing a novel and poignant look at the chronic state of non-compliance in their states and districts, we hope to provide these key representatives with the information and pressure they need to hold the EPA accountable.

About EDGI

EDGI is an international network of over 175 members from more than 80 different academic institutions and non-profits, comprised foremost by grassroots volunteer efforts. Since 2016, EDGI has served as a preeminent watchdog group for federal environmental data, generating international effort to duplicate and monitor repositories of public data that are vital to environmental health research and knowledge. EDGI's work has been widely acknowledged, leading to EDGI testifying before Congress on declines in EPA enforcement, and hundreds of mentions in leading national and international media such as *The New York Times*, *The Washington Post*, Vice News, and CNN. For more about our work, read our [2019 Annual Report](#) and [2020 Annual Report](#).
